Osborn exhibits in Norway

September 2013

## **Osborn at Offshore Technology Days 2013**

**From October, 23<sup>rd</sup>-24<sup>th</sup> Osborn is taking part in the Offshore Technology Days (OTD) in Stavanger. It is Norway's biggest yearly fair for companies related to oil-, gas- and general energy. It is the second consecutive time that Osborn is exhibiting at this fair (Boot J 5004). Osborn will focus on technical brushes and here especially on those for weld seam cleaning.**

As an undesirable by-product MIG-, MAG-, WIG- and manual welding create all sorts of debris on the surface of the work-piece. Silicates and Bluecolor debris on root- and fill layers are not easy to recognize. The welder needs to trust in the efficiency of his selected cleaning tool. Osborn wire-brushes are predestined to this kind of cleaning work. They are non-stock removing and leave the welded surface untouched while debris is being taken off completely layer by layer. Additional advantages: Brushes are less noisy and work nearly spark-free – two essential points when talking about working safety. Furthermore the surface of the work-piece will not heat up as strongly as when using a grinding disc.
