Osborn introduces new catalogue

December 2013

## Osborn Solutions for the Pipeline Industry

Osborn introduced a new catalogue with application solutions for the pipeline industry. The focus is on Osborn products for the areas of exploration, pipe manufacturing and pigging. Among the products are transport rollers for the pipe manufacturing in high temperature areas, cutback-systems and brushes to equip cleaning and inspection pigs. Another chapter is devoted to weldseam cleaning. The reader gets background information on the different welding methods and the advantages of cleaning weldseams with brushes versus using grinding discs. A “productfinder” helps selecting the right brush according to the chosen welding process.

The catalogue is available in English language and can be downloaded on [www.osborn.com](http://www.osborn.com) or via the shown QR-Code. As an alternative, the printed catalogue can be ordered via email at [presse@osborn.de](mailto:presse@osborn.de)
